

# Ready for a Fresh Start, Fast?

Migrate to Cloudflare to supercharge application and web performance

Maintaining legacy CDN providers, like Akamai, Fastly, and AWS, no longer makes sense. You can't afford to build programs around or devote resources to outdated architectures at a time when IT and Security teams are running leaner than ever. You need a platform that enables you to deliver lightning-fast web and application experiences that will also protect you from online threats.

Migrate to Cloudflare so you're no longer stuck with the high costs of implementation, maintenance, and support. We help you reduce the number of vendors and tools, as well as operational complexity, with our modern platform that is architected to be fast, reliable, extensible, and secure - by design.

A mobile communications technology leader successfully migrated its public website, **after 20 years with Akamai**, to Cloudflare for a better digital experience plus **>20% cost savings**.

## Challenge

The company's decision to decentralize purchasing of CDN services illuminated the high cost of using Akamai for their public-facing websites.

## Solution

A short proof-of-concept of Cloudflare Application Performance suite resulted in measurable cost savings and performance improvements. It was also determined the flexibility to integrate additional Cloudflare tools, like Workers for serverless, would enable the organization to scale further when ready.

Protect &  
accelerate  
**60TB**  
traffic

**Over 20%**  
lower cost  
than  
Akamai

### About the Customer

Global leader in network and communications technology for service providers.
