

Cloudflare Professional Services

Deploy Cloudflare with an expert. Scoped by outcome, not by session count.

Cloudflare Professional Services help you deploy Cloudflare to a specific customer outcome — replace a legacy VPN, harden email against phishing, protect a network from L3 DDoS, migrate off a legacy SWG. Each service is scoped to one outcome, delivered by a Cloudflare consultant who has run the same deployment across hundreds of organizations, and backed by a Cloudflare-authored playbook.

Fixed price. Fixed scope. Standard deliverables. You know before the engagement starts what you're getting, how long it takes, and what documentation you keep.

Why Cloudflare Professional Services

Outcome-based scope

Priced and scoped by result. No session counters, no surprise change orders.

Playbook-driven delivery

Every engagement follows a Cloudflare-authored playbook with standard deliverables.

Expert alongside your team

Consultants who have run the same deployment hundreds of times, available globally.

Three ways to engage

Advisory

A Cloudflare consultant provides a technical Configuration Blueprint and coaches your team through the build.

Deployment

A Cloudflare consultant leads the configuration and deployment directly on your Cloudflare account.

Optimization

A Cloudflare consultant reviews an existing Cloudflare configuration against the latest best practices and either documents the gaps or executes the remediation.

Engagements outside the outcome-based catalog — highly customized, multi-solution, or complex enterprise integration — are available as a Custom SOW.

Where Professional Services help

Application Services		Protect and accelerate the apps and APIs your customers depend on		
OUTCOME		ADVISORY	DEPLOYMENT	OPTIMIZATION
Basic Cloudflare Setup Baseline CDN and WAF for up to five zones		●	●	
Bot Protection WAF, Rate Limiting, and Bot Management layered together		●	●	
Cloudflare Configuration Assessment Review current config against the latest security, performance, and reliability best practices				●
Configuration Remediation Expert execution of the fixes surfaced in the assessment				●
Network Services		Protect the network layer and connect your sites through Cloudflare		

OUTCOME	ADVISORY	DEPLOYMENT	OPTIMIZATION
Layer 3 DDoS Protection Validate, deploy, or tune protection against L3 DDoS attacks with Magic Transit	●	●	●
Network Connectivity Deploy or tune secure, high-performance inter-site connectivity using Cloudflare WAN	●	●	●

Cloudflare One Modernize how your people, devices, and data connect and stay protected			
OUTCOME	ADVISORY	DEPLOYMENT	OPTIMIZATION
Remote Access Modernization Move from legacy VPN to Zero Trust Network Access (ZTNA)	●	●	
SASE Architecture & Configuration Blueprint and best practices to start, accelerate, or tune your SASE journey	●	●	●
SWG Migration Move from legacy web proxy or SWG to a cloud-native Secure Web Gateway with advanced security	●	●	
Email Security Architectural blueprint to harden email against malware, phishing, business email compromise, and multi-channel attacks	●		

How it works

 01 Plan Kickoff and requirements gathering. Design and rollout phases confirmed.	 02 Configure Guided configuration against Cloudflare best practices.	 03 Test Validation against the predefined scope on a pilot group.	 04 Deploy Broader rollout, project review, and knowledge transfer.
--	--	---	--

Every engagement includes

✓ Project Management Coordination throughout the project	✓ Custom Deliverables Specific deliverables scoped to the project use case	✓ Recorded Knowledge Transfer Walkthrough your team can revisit any time
